

MAINTENANCE AND CARE

Before First Use:

Check with Plumber if the tap has been flushed by un-screwing the filter/aerator and had water running through for 5 minutes. This is to be done on installation and before the first use. Check the filter/aerator has been screwed back on.

Care and Cleaning:

For daily cleaning of the mixer tap, use a soft cloth dampened with water and, if necessary, a mild detergent. Dry/polish with clean soft cloth

Never use the following:
Abrasive cleaners or cloths/pads
Calcium dissolving detergents or detergents containing alcohol

To remove calcium deposits, use ordinary white vinegar diluted with water and rinse with plain water.

It is recommended to clean the filter/aerator every now and then. Soak in vinegar solution if calcium deposits have built up.
